

THE STATUS OF “COMPLETE”

The “**ENTER STATUS**” key is one of the function keys located on the left side of the “Current Orders Display” (COD).

To “**Enter Status**” on an order means to say that the order is “**COMPLETE**”

Types of orders to “**Enter Status**” on:

- **EKG’s** that have been completed
- **GI procedures, Pulmonary function tests, Neurology tests, CPP tests,** etc that have been completed.
- “**Nursing orders**” that have been completed..... such as
 - “DC foley”
 - “CHK 2ND PVR BY BLADDER SCAN”
- **Consults**
 - “Wound Care”, etc that you can confirm were done w/ notes in chart
- **LABS**
 - “**ADD-ON labs**”
 - These labs do NOT cross the interface to lab, thus their status will never change in POE.
 - One should “Enter status” on add-on labs once they have been sent to the lab and a result can be found in LCR.
 - “**MISC LAB TEST (NAME IN COMMENTS)**”
 - These labs do NOT change status, thus will not “fall off” COD.
 - Specimen sent to LAB with appropriate requisition.
 - Once the LAB enters appropriate order for test into LIS (from Comments of MISC order), the order will cross to POE & the status of the new order will display as “TES”.
 - The nurse can then “Enter Status” on the “**MISC Lab Test**”, indicating it has been “completed”.
 - **NEVER “ENTER STATUS”** on orders in the “**TES**” status!!!!

*******NEVER “ENTER STATUS”** order for one of the “**interfaced departments**” (LAB, RADIOLOGY & PHARMACY) other than what was outlined above!!! *****
